

# CERATEPPE

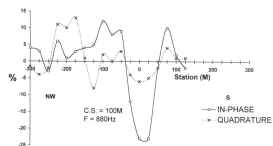

## TURQUIE

Voici comment un levé électromagnétique dans le domaine des fréquences (FDEM) peut vous aider à trouver une mine.

The Cerattepe deposit is a Kuroko type Pb, Zn, Cu VMS deposit located in northeastern Turkey.

The deposit was indicated by a Pb, Zn, Cu soil geochemical anomaly.

A horizontal loop frequency domain EM survey was conducted over the soil anomaly.

The deposit produces a strong anomaly with a high in-phase to Quadrature ratio.
